BOTTOM STYLES

ALTA GAMMA BIB SHORTS & SHORTS

The Alta Gamma bib shorts and shorts are made of Moxie 200 gram nylon/spandex and feature a printed back panel and side panels. The side panels have integrated accent panels on the front and back allowing graphics to wrap around the thigh. The bib straps are made of breathable, wicking micromesh to keep you cool and dry and incorporate a handy built-in pocket for electronic devices. All fabric has ultra violet protection and is UPF 50+. Includes standard issue MC-3 and WMC-3 inserts. Upgrade available for the Cirro or Alta pad.

BIB TIGHTS, TIGHTS & KNICKERS

Full length Super Roubaix tights printed using the same artwork and pattern as your bib shorts or shorts. Standard issue is without an insert. An insert can be added for an additional charge. The knickers are constructed of Super Roubaix fabric printed with the same artwork and pattern as your bib shorts or shorts. Includes standard issue MC-3 and WMC-3 inserts. Upgrade available for the Cirro or Alta pad.

TOP OPTIONS

SHORT SLEEVE & SLEEVELESS JERSEYS

Available in either Alta Gamma, Pro-fit, Euro-fit or women's specific. The Alta Gamma and Euro-fit are slimmer Raglan shoulder jerseys with an aggressive performance fit that moves with your body while on the bike. The Alta Gamma is constructed with Michron and several of our higher-end FR-C fabric while the Euro-fit uses only Michron microfiber fabric. The Profit is a Raglan shoulder jersey that is longer and bigger in the chest, shoulders, sleeves and arm cuffs. It is also constructed with Michron microfiber fabric with side panels. Euro and Pro-fit are available with mesh sleeves and side panels for hotter conditions. Features either a 45 cm invisible zip or full zip (black or white).

LONG SLEEVE JERSEY

Available in either Pro-fit or Euro-fit. The Pro-fit is longer and bigger in the chest, shoulders, sleeves and arm cuffs. The Euro-fit is slimmer with an aggressive performance fit that moves with your body while on the bike. Constructed with Thermosquare fleeced knit fabric for increased warmth. Features a full zip (black or white).

ALPINE WINDFRONT JACKET

The Alpine Windfront Jacket features front panels of WindTex wind resistant fabric and back panels of Thermosquare for comfort and breathability. This garment offers the widest range of cold weather protection. Features either a full zip (black or white).

NEW CORSA JACKET & VEST

The Corsa Jacket now has a detachable sleeve option. It's Two great winter pieces in one! The front panels are multi-layer WindTex to help resist wind and water. Breathable Roubaix panels are on back, sides and under sleeves allowing garments to follow body contours for close fit. Great for riding in cold conditions. Features three external rear pockets. Features a full zip (black or white).

OSLO JACKET & VEST

The Oslo Wind Jacket is lightweight and protective against wind and water. Perfect for quick descents or cool weather. No pockets. The vest's lower back is printable mesh for added breathability. Features a full zip (black or white).

The Raintex Wind Vest utilizes a permeable membrane-like fabric called Raintex that both vents heat and is also water resistant. The vest features a fully printable mesh rear panel with the option of pockets or no pockets. In comparison to the Oslo Vest, the Raintex Vests will be slightly slimmer due to the more flexible Raintex fabric used.

CHAMOIS UPGRADE INFO.

ALTA OMNIFORM™ PAD

The highest level in comfort and protection for ladies, the Alta OmniForm insert was designed for Giordana's top-of-the-line women's bibs and shorts. Aptly named, the Alta represents the highest level of technology available in women's-specific chamois. Giordana utilized it's Women's Contour Fit™ process to develop a pad that provides the proper protection for female cyclists. The modified and streamlined silhouette is narrower to better contour to the female form on the bike. As a result, the Alta is considerably less bulky, yet retains the protective qualities essential at this level. The insert is elastic and conforms to the body in motion, but returns every time to its original shape after activity. (\$5.00 up charge for the FULL custom program; Not available for SEMI custom.

CIRRO OMNIFORM™ PAD

The Cirro O.F.™ pad is specifically designed for Giordana's top-of-the-line bibs and shorts. The thickness of the Cirro O.F. varies and is 14mm at its thickest point. The uppermost layer of the Cirro utilizes a special Nylon microfiber that incorporates Aloe Vera. Giordana's Cirro is the first and only chamois on the market today that takes advantage of Aloe. The Aloe component is not a treatment, but is permanently incorporated into the material. Particles of Aloe Vera are infused into the threads of the microfiber during the manufacturing process, so that the benefits will not wash out or fade over time. The integrated Aloe cools, protects and even heals the skin while the rider is in the saddle. In addition, Aloe Vera is a natural defender against bacteria. Below this uppermost layer is a 4mm thick expanded memory foam with a waffled texture. The divots that create the texture aid in ventilation and perspiration management so the pad does not retain moisture, but moves it to the outside where it can evaporate rapidly. The foam is bonded on the bottom with an ultrafine protective liner. Together, these three layers make up the primary portion of the chamois that you see. Underneath the upper layers is a 8mm thick section of open

cell padding that is hand sewn to the materials above. This highly ventilated padding is cut to a unique smaller shape that protects and supports the rider at crucial points against the saddle. The shape of this bottommost layer is designed to comfortably contour to the rider's anatomy and provide protection where needed most. A prostate relief cut-out in the center and independent glute panels allow maximum comfort and movement with the body in motion. To ensure that seams never come in contact with the rider's body, all stitches are completely concealed in recessed channels. The Cirro O.F. insert is elastic—stretching and conforming to all movements on the bike, then returning to its original shape after exercise. (\$5.00 upcharge for FULL Custom; Not available for SEMI Custom.)

STANDARD CHAMOIS INFO:

MC3-OMNIFORM™ PAD

The MC3-O.F. insert is a one piece, seamless insert that is both lightweight and flexible. Made of polyester microfiber, it is designed to adapt to the contours of the body in motion, permitting natural movement. It is constructed with differential thickness to provide more protection where needed while guaranteeing softness and comfort.

WMC3-OMNIFORM™ PAD

WMC-3 is specially designed for use in our women's shorts. The pad is a result of a study focused on female body movements when pedaling, taking into account a woman's different protection needs. The WMC-3 is also molded using Giordana's HF™ (High Frequency) OmniForm™ processing technique to obtain a soft and extremely flexible insert. The pad is a single, seamless component with differentiated thickness to contour to the body and allow full freedom of movement. The advent of the WMC-3 makes shorts of the highest quality, comfort and performance available to women.

FABRIC INFO

SUPER ROUBAIX™

A microfiber version of our Roubaix, a special interlocking knit that fits like nylon/spandex but thicker. Super Roubaix moves moisture more efficiently and has better breathability. Garments made with Super Roubaix have slightly higher compression effects, which provide a massaging effect on muscles.

WINDTEX®

WindTex fabric is composed of three layers. The outermost layer is smooth and resistant to wind, while the middle is a semi-permeable membrane that protects from rain, but perspiration vaporizes to escape. Closest to the body is a soft-brushed material that retains warmth.

THERMOSQUARE™

For cool weather, riders need a jersey fabric that feels warm, yet lightweight and breathable at the same time. This high performance fabric builds on the success of our microfibre summer fabrics. Immediately, you'll notice the higher loft and softbrushed inner surface. Both are designed to create air pockets to trap body heat. You won't feel warm if perspiration stays on your skin, so Thermosquare yarns are chosen for their ability to wick moisture to the outer surface of the fabric. You'll stay warm and dry in Thermosquare fabric.

MICHRON®

A 100% polyester microfibre yarn that moves moisture off the skin more rapidly than ever before. The unique miniature honeycomb textured knit allows air flow to keep you cool.

MINIQUADRO

MiniQuadro is a 100% polyester fabric knitted to help moisture pull through the garment from the inside out. It is soft to the touch and lightweight, helping to provide exceptional ventilation.

MOXIE NYLON/SPANDEX

Moxie fabric is treated to promote fast wicking and evaporation of moisture. This treatment means that perspiration will not be trapped next to the skin, so riders will feel cooler and drier. Moxie nylon/spandex fabric is offered in 200 gram weight and is used in bibs, shorts, skinsuits and our tri clothing.

OSLO®

For protection from wind and weather, this lightweight jacket fabric is hard to beat. Its micro-filament yarns keep wind and water on the outside, while allowing breathability. It takes the edge off of cool morning or evening rides and reduces the chilling experienced on descents. Its ability to be compact makes it easy to carry a vest or jacket anywhere.
